

## INTRODUCTION

apDia is a young company (founded in 2008) active in the field of human *in vitro* diagnostics. We manufacture and/or sell immuno-assays (ELISA and rapid tests) with applications in microbiology, serology, parasitology, immunology and other clinical areas.

Our sales people have longstanding experience with in depth knowledge of the products they are selling.

We are interested in your needs as a customer and would like to invite you through this newsletter to get acquainted with us and our products.

## AST ELISA (ASLO ELISA)

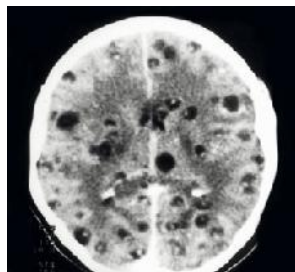

apDia is the sole manufacturer that offers an ELISA for the detection of anti-Streptolysine-O antibodies. Our test results are expressed in IU/ml (with reference to a WHO standard).

The ASLO ELISA can be run on automates.

## CYSTICERCOSIS ANTIGEN ELISA

apDia has a unique product for the detection of *Taenia solium* cysticercosis. This test screens for the presence of circulating cysticercosis antigen. Opposite to most suppliers who offer a *Taenia solium* antibody test, our test allows the specific detection of viable cysticerci.

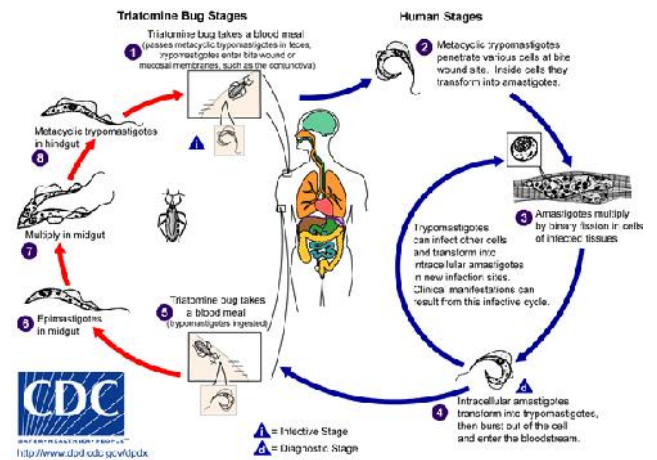

## CHAGAS

The WHO is warning for years already for this latent disease that occurs predominantly in South America. Approximately 280.000 people<sup>1</sup>, originating from South America and carrier of the parasite without being ill themselves, are living in the Benelux.

apDia can supply ELISA kits and a rapid test for the detection of Chagas.

ELISA kits are available in 2 formats: 48 and 96 tests.

## TECHNICAL SERVICE

apDia offers service contracts for Dynex instruments. Both for the DSX and the DS2 we have a team of certified technicians standby. Through an extended soft-ware and knowledge package we can closely monitor your problems, allowing us to aim for maximum customer satisfaction and minimal downtime for your instrument(s).

Make an inquiry for a quotation now.
